NP10/20

Electronic Article Surveillance Wireless Connected Sensors

The new range of Checkpoint wireless sensors revolutionizes EAS systems. Re-inventing every aspect of the traditional antenna, the new NP10 and NP20 boast a sleek & contemporary design structure, together with powerful performance improvements delivered by our new NEO wireless electronics.

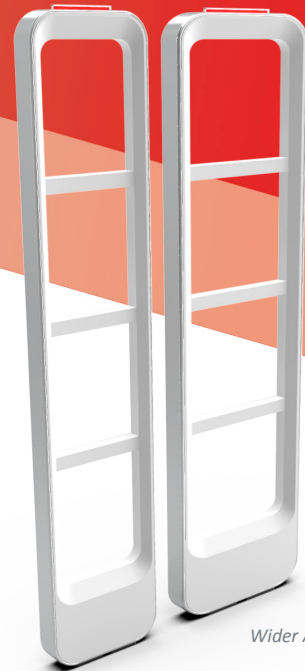

- Increased aisle width between sensors, opening store entrances
- Wireless connectivity easy installation, instant secure synchronization & network communication
- Multiple audio files - flexibility to choose alarm sounds or download a custom file

“Functional, beautiful and better performing, the NP range will change how you view EAS sensors.”

NEO Wireless Electronics Intelligence Built In

The NEO platform advances performance capabilities beyond any RF antenna. A sophisticated sensor, NEO connects directly to store networks, mobile and the Checkpoint cloud platform with no middleware, allowing continuous and seamless data gathering. With its 24/7 real-time self-health check, any issues are picked up immediately. The new electronics mean the antennas are compact and slimmer with the scope of supporting more technology, such as video people counting, RFID and magnet detection without changing the aesthetics of the antenna frame.

- Remote connectivity ensures the EAS investment is online 24/7
- Data collection and management via Cloud/Real Time monitoring
- Live system health check
- On Line and live service support. Respond & Fix
- Invisible upgrades available: Investment protection for the future

Wider Aisles – up to 2.7m/8.8ft
